

HYRAX INTERNATIONAL LLC

Onsite Assessment Program

BENEFITS

DELIVERING DRAMATIC TECHNOLOGY PROGRAM IMPROVEMENT

Our assessment program brings an experienced, objective perspective to your team. Hyrax International works closely with you to create a guided self-assessment. Our subject matter experts bring new perspectives, your experience applies it effectively in your own working environment.

Our goal is simple: To give you the ability to improve your own technical competency, lean operations, risk management, and development process.

*Zacharias J. Beckman
President & CEO*

Getting Started

Fast, Focused Technology Guidance

Hyrax International LLC offers focused, fast-moving assessment programs in a variety of technical competencies, that can be narrowed in on specific areas of concern (such as Requirements Management) or can be used in concert to assess your overall organizational competency and recommend improvements throughout your entire operational program.

The Goal

Efficiency and Hyper-Productivity

Hyrax International LLC's onsite assessment programs give you the ability to improve your own technical competency, lean operations, risk management, and process execution.

Every onsite assessment begins with an open mind, in the spirit of collaboration. We don't just deliver an assessment. That's old-hat and ineffective. We give you the tools and outside expertise to self-assess and execute.

We offer subject matter experts that arm you with decades of experience. We provide the knowledge you need to improve your technical competency (such as quality assurance or CMMI), achieve process improvement (such as risk assessment and change control) and streamline your development methodology (using tools like Rational Scrum™ and software automation). Our expertise becomes your reference library.

Our Track Record

Past Performance

Our subject matter experts have delivered successful technical programs to a wide variety of Government, Commercial, and Military clientele, and our programs are internationally accepted. Some of our clients include:

- Fios, Inc.
- NASA
- Practice Technologies, Inc.
- United Future LLC
- Visa Corporation

For details on these and other engagements, ask for our white papers and past performance summaries.

About Us

Hyrax International

Technical competency, lean operations, risk management, process improvement. It's simple: We use our experience and expertise to help you help yourselves in the most economically sensitive way possible. There's only one way that's going to happen: With your people, not ours. We understand that. We make sure you know how to succeed, then we step out of the picture.

Our proven process, Rational Scrum™, delivers an agile-based methodology that's been successful time and again at our clients. It puts effective, substantive core principles together to ensure efficiency, eliminate risk, and safeguard quality. Call today to find out how you can deliver excellence.

Getting Started

Initial Scope & Problem Assessment (estimate: 1-5 days)

Assessments begin by interviewing your team on current practices. We assess current process throughout your organization and get a sense for what needs attention across domains such as quality assurance, risk management, requirements management, change control, and program management.

1. Introductions
2. Briefing
3. Current state of affairs
4. Issues the organization is facing
5. Business goals for this assessment
6. In-depth discussion
7. Current projects
8. Current obstacles to success
9. Existing processes
10. Perceived process limitations
11. Technology transfer
12. Policy and procedures
13. Supporting systems & tools
14. Prioritization
15. Select implementation team
16. Ensure complete representation

Comparison (estimate: 1-2 day)

A comparison between current practices and best practices. During this phase a recommended business case and development outline is created.

This step delivers two critical outputs: A risk-driven, targeted list of team goals and an assessment relative to current best practices and industry standards.

1. Analysis presentation
2. Review of findings
3. Comparison to standards
4. Risk-based assessment

Implementation Planning (estimate: 1-3 days)

We stress technology transfer from our experts to your own team. We do this by having *your team* write the implementation plan, relying on us for guidance and recommendations. We don't deliver an anonymous report and then walk away — we enable you to create your own strategy, and help guide in its execution.

During this session a joint plan is prepared covering the procedures that will address each risk.

1. Analysis presentation
2. Recap of risks & goals
3. Review of findings
4. Identify stakeholders
5. Team strategy and goal setting
6. Elaborate risk mitigation plan
7. Develop individual plans
8. Validate and assess quality
9. Budget, technology, operations
10. Requirements capture
11. Project planning
12. Assess training needs
13. Brief stakeholders
14. Incorporate stakeholder advice
15. Establish schedule

Next Steps

Once completed, the assessment arms you with the information you'll need to move ahead effectively. Your team will be ready to execute process improvements that were designed by the team, for the team.

Our onsite assessment program is focused and typically delivers results in weeks, not months. Contact us today and learn how you can leverage our Best in Class Guidance programs.

BEST IN CLASS GUIDANCE

Hyrax International LLC has the background and experience to provide your team with guidance in mission critical areas such as:

- Putting agile methods to work
- Delivering bug-free products to your clients
- Monitoring project health
- Managing subcontracts and subcontractors
- How to deliver impossible projects on-time and on-budget
- Delivering quality and defining quality attributes
- Requirements management
- Measuring progress with metrics
